Web programiranje 1 – Dokumentacija za sajt

Ime I prezime studenta: Marjanovic Aleksandar

https://github.com/TheHandOfKing/Hike-Shoes

https://thehandofking.github.io/Hike-Shoes/

Broj indeksa: 115/17

Decembar 2018, Beograd

Sadrzaj:

1 Uvod

Sajt za predmet Web Programiranje 1 napravljen je po uzoru na sajt Nike.com bez upotpunjenog responsive design-a.

1.1 Korisceni programski I markup jezici

HTML 5, CSS 3, Javascript, Jquery

1.* Pored ovoga korisceni su i font awesome i google 'Oswald' font, sve ostalo je radjeno u js-u

1.2 Opis funkcionalnosti

Index.html

Dinamicki ispis sadrzaja vrsi se nad skoro celom stranom, postoje samo tagovi koji sluze kao placeholderi za ostale tagove. Postoje i rucno pravljeni tagovi, bez dinamickog ispisivanja radi lakseg koriscenja. Napravljen je carousell sa tekstom koji moze da se menja klikom na strelice. Ispod je isti carousell bez strelica, sa

slikama i automatskim tajmerom menjanja slika, svaka slika ima razlicito vreme menjanja. Svaki a i span tag ima funkcionalnost preko event listener-a. Join/log in tag koristi prevent default, I time se klikom na njega ne vodi ka linku vec se otvara div za login, koji je najosnovniji, sa 2 input taga i login button-om, koji zbog tematike predmeta nisu podrzani i ne rade trenutno nista. Pored njega je tag koji vodi do biranja jezika, treba napomenuti da se index stranica nece nikad ucitati ako jezik nije izabran, i da kad god se bira novi jezik stari se brise. Ovo je uradjeno preko najosnovnijeg local storage-a, koji ako je prazan odvesce nas na stranicu gde se biraju jezici.

Ispod svega ovoga se nalaze Shop now i New? Register! span tagovi. Shop Now vodi do stranice za kupovinu, o kojoj ce biti reci kasnije, New? Register! ima event listener koji kao I join/login a tag prvo boji celu pozadinu u crno sa opacity-jem 0.7. Onda otvara div za registraciju, koja pokriva username, password I e-mail. Svaki od tih input tagova ima svoj regex koji proverava validnost podataka, opet, button Create an Account nema funkcionalnost, jer nema baze I serverskij jezika koji podrzavaju prenete informacije. Na oba diva p tag sa X-om stavlja display svih tagova za login i regeister, i crne pozadine na none. Footer, koji se koristi svuda ima samo dinamicko ispisivanje teksta.

hikeLangSelect.html

Deo gde se biraju jezici je skroz dinamicki ispisan, svi divovi I sav tekst. Svaka selekcija jezika iz bilo kog regiona se pamti u Local Storage-u I koristi se na ostalim stranama. Zbog samog local storage-a ovo je prva strana koju ce korisnik videti.

Klikom na bilo koji region, border oko regiona postaje boldovan I za taj region se ispisuju drzave karakteristicne za njega. Treba pomenuti I hr tag sa crnom linijom koja prati selekciju regiona. Ovo je uradjeno preko event/ event.Target i event.CurrentTarget funkcionalnosti unutar javascript-a. Slike drzava su jedna slika sa razlicitim koordinatama. Ako se odabere region Rest of Africa, on se vodi I ispisuje svuda kao Central Africa.
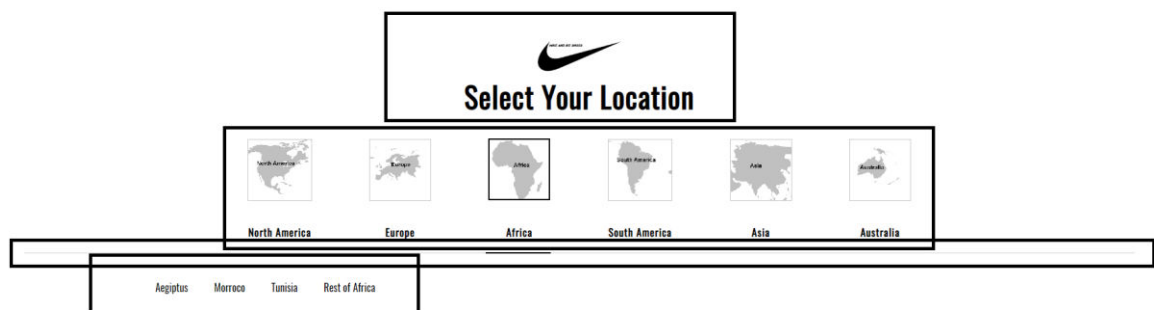

Shop.html

Pored najosnovnijeg dinamickog ispisivanja sadrzaja za patike, postoji I opcija da se item-I dodaju u korpu. Klikom na cenu uzimaju se podaci iz tog diva, a to su
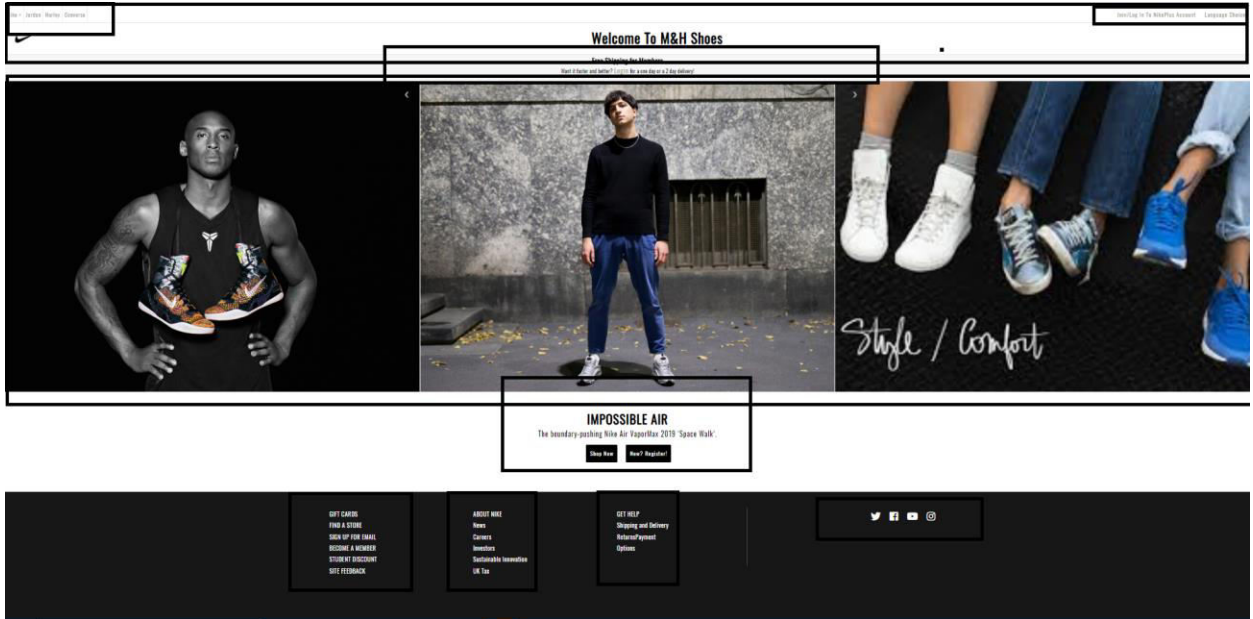

uvek 3 podatka, cena, naziv (data-shoes), I slika koji se dodaju u div klasu koja se zove one row, funkcija koja pravi div klasu one row uzima ova 3 podatka za svoje parametre I koristi ih u pravljenju, parametri se uzimaju preko klika. Postoje 4 funkcije koje pokrivaju ovu celu stranu. Prva cartTotalUpdate(), u svakom trenutku prati koja je ukupna cena svih datih item-a u cart-u, tako da se ona koristi kada se strana ucita, kada se klikne na cenu, kada se klikne na remove i kada se poveca ili smanji quantity bilo kog itema. Sledeca addToCart upravo dodaje iteme u korpicu I koristi 2 funkcije, addItemToCart I cartTotalUpdate. Preko parametra event.target znamo na sta smo kliknuli, I to na sta smo kliknuli prenosimo u drugu funkciju (addItemToCart) da bi pravili redove divova za iteme.
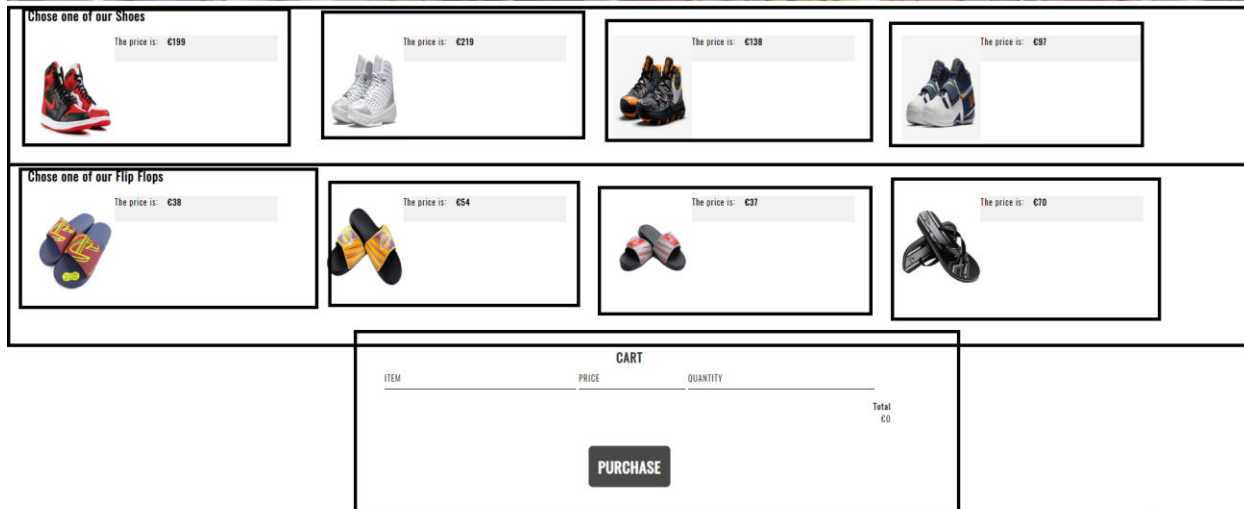

Treca addItemToCart f-ja koristi 3 parametra koja sam vec naveo. Ona kreira div klasu oneRow, i ima par restrikcija, zabranjuje da se dodaju 2 ista itema, jer postoji quantity opcija, to se radi samo preko return-a, obican if statement. Da bi se item dodao koristi se varijabla carRowContnet koja pravi sve unutar oneRow-a, odnosno 3 diva, za sliku, cenu i kolicinu. Svaki put kada se klikne na neki item izvrsava se I cartTotalUpdate(). Poslednja, cetvrta purchaseSim() f-ja nas samo alertuje da smo nesto kupili I clear-uje sve divove sa klasom oneRow, preko while-a, I naravno ima cartTotalUpdate() da bi se cena resetovala na nulu.

Ostale stranice nemaju posebnih funkcionalnosti koje treba da se navedu, sajt, treba opet naglasiti nije responsive.
